

# Identificador de CI's

—

Eletrônica Embarcada - UnB/FGa

# Problemática

O Identificador de CI's visa facilitar a identificação de circuitos integrados da família 74, servindo como um equipamento de bancada, dando informações suficientes para identificação de portas lógicas.

# Objetivo

> Identificação de CI's TTL, da família 74, apresentada em um display *OLED* de 0.96" que trabalhe com o protocolo I2C;

Seu diferencial, dentre os produtos já existentes no mercado, é o uso de um microprocessador de baixo custo, o *MSP430G2ET*, que é capaz de atender todos os requisitos de processamento e manter o custo do projeto abaixo da média de mercado.

# Solução

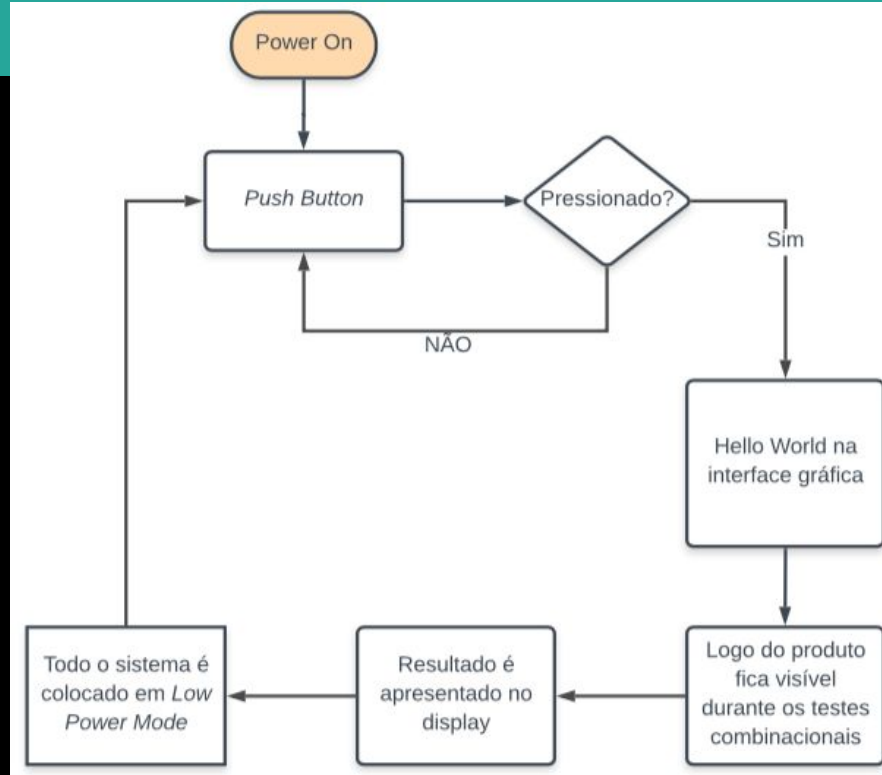

- Praticidade na identificação de portas lógicas;
- Possibilidade de testar a integridade dos componentes;
- Estrutura móvel e compacta;

# Descrição do Hardware

- *OLED 0.96"*;
- *Soquete ZIF 18 pinos*;
- *Push Button*;

# Descrição do Hardware

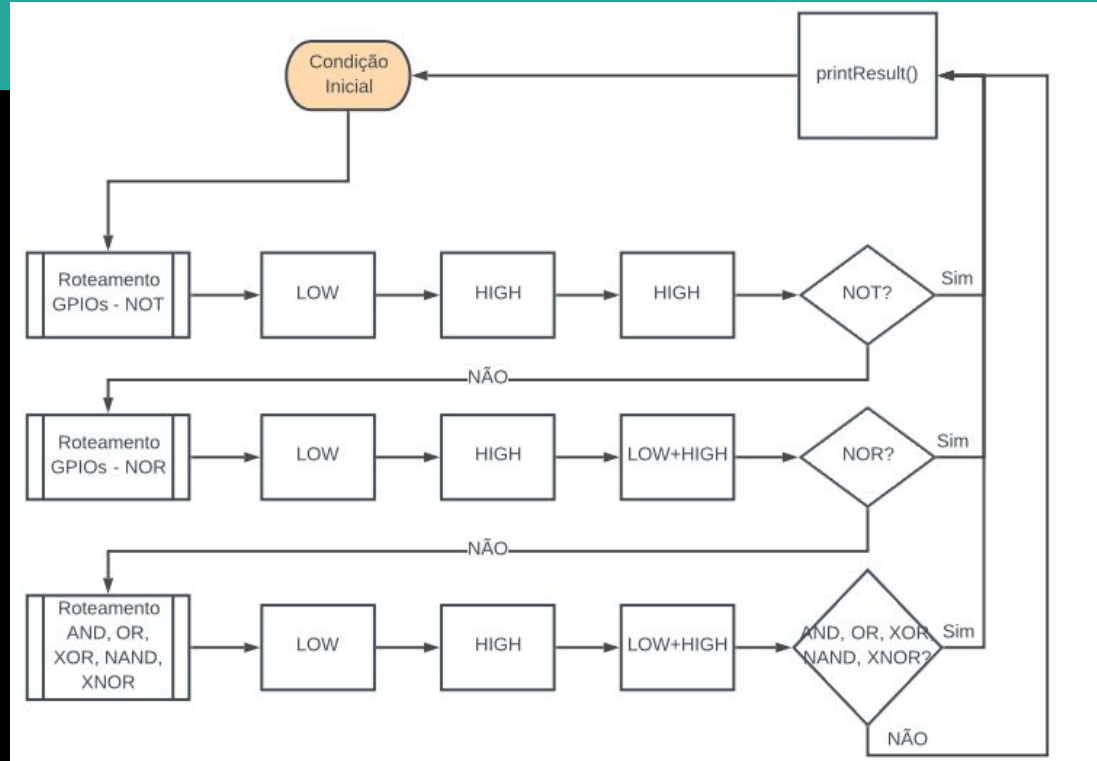

# Descrição do Software

- Biblioteca *OLED\_128x64*;
- Lógica combinacional;
- Interrupção em assembly;

## Configuração do protocolo I2C

```
5 // Configure I2C BUS
6 void I2C_begin(void)
7 {
8     UCB0CTL1 |= UCSWRST;           // Enable SW reset
9     UCB0CTL0 = UCMST + UCMODE_3 + UCSYNC; // I2C Master, synchronous mode
10
11     UCB0CTL1 = UCSSEL_2 + UCSWRST; // Use SMCLK, keep SW reset
12     UCB0BR0 = 10;                 // fSCL = SMCLK/10 = 100kHz
13
14     UCB0BR1 = 0;
15
16     P1SEL |= BIT6 + BIT7;         // Assign I2C pins to USCI_B0
17     P1SEL2 |= BIT6 + BIT7;        // Assign I2C pins to USCI_B0
18
19     UCB0CTL1 &= ~UCSWRST;         // Clear SW reset, resume operation
20     //IE2 |= UCB0RXIE + UCB0TXIE; // Enable RX and TX interrupt
21 }
```

## Configuração do protocolo I2C

```
23 // Begin Transmission to slave via I2C BUS
24 void I2C_beginTransmission(volatile int slave_address)
25 {
26     while(UCB0CTL1 & UCTXSTP)           // Ensure stop condition was sent
27         ;
28
29     UCB0I2CSA = slave_address;
30
31     UCB0CTL1 |= UCTR;
32     UCB0CTL1 |= UCTXSTT;                 // I2C TX, start condition
33 }
```

```
35 // Begin Transmission to slave via I2C BUS
36 void I2C_write(unsigned char data, unsigned int txControl)
37 {
38     UCB0TXBUF = data;
39
40     if (txControl)
41     {
42         while(UCB0CTL1 & UCTXSTT)
43             ;
44     }
45     else
46     {
47         while((IFG2 & UCB0TXIFG) == 0)
48             ;
49     }
50 }
```

```
52 // End Transmission on I2C BUS
53 void I2C_endTransmission(void)
54 {
55     UCB0CTL1 |= UCTXSTP;
56
57     while(UCB0CTL1 & UCTXSTP)
58         ;
59 }
```
